## Letter of rekommendation

Promostal sp.zo.o. has manufactured, delivered and assembled steel ramps for our project "Västra Eriksbergs etapp II" in Gothenburg, Sweden. Västra Eriksberg is a new exclusive residential area in the city centre.

The steel ramps are approximately 240 meters in length and are situated in a park area that connects the lower part of the residential area, by the sea, with a higher part. The purpose of the ramps is to allow pedestrians to move between the areas through the park. Being a centre part of the area the landscapers have put a lot of effort with the park were the steel ramps, exclusive lighting and over 17 000 plants are ingredients that have come out.

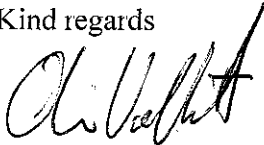

Promostal has manufactured our ramps in their factory in Poland. During this process we have made a couple of visits to Poland to ensure the quality of the ramps. Visits have been preformed both with people from the project, my Production Manager and I, and with an external steel expert, who preformed a quality audit. Results from these visits have been very positive.

Promostal were responsible also for the transportation and assembling on site. Important factors for us have been delivery on time, quality and safety. Our experience from Promostal and their staff is very positive on all these points. The ramps were delivered and assembled on time. Promostals staff followed all our safety regulations and without any incidents. And the ramps passed the final inspection with only a few minor remarks. In all we are very happy with the final result and have also received positive response from our client for the quality of the ramps. This is naturally is very satisfying for us.

Over all my experience from Promostal has been very positive. This extends to their engineers and their work to prepare workshop drawings for the project, we had a very good dialog during this period. Also the quality of the work preformed by their steelworkers and welders in factory has been impressive as well as the assembleling on site.

Due to this I can only highly recommend Promostal as a very competent partner to work with.

Kind regards
